

Medical Alert: Lymphoedema

NO IV Access

NO Needles

NO blood tests

NO blood pressure

To be carried out in affected limb

RIGHT ARM

LEFT ARM

RIGHT LEG

LEFT LEG

Lymphoedema is a condition which slows down the rate of flow of fluid through the lymphatic system resulting in swelling, usually of one or more limb/s.

This makes the area much more vulnerable to infection if any break in the skin occurs. Great care should be taken to prevent this. [NHS](#)
